

App Development Final Project

Eris Degani & Kaolin Stacey

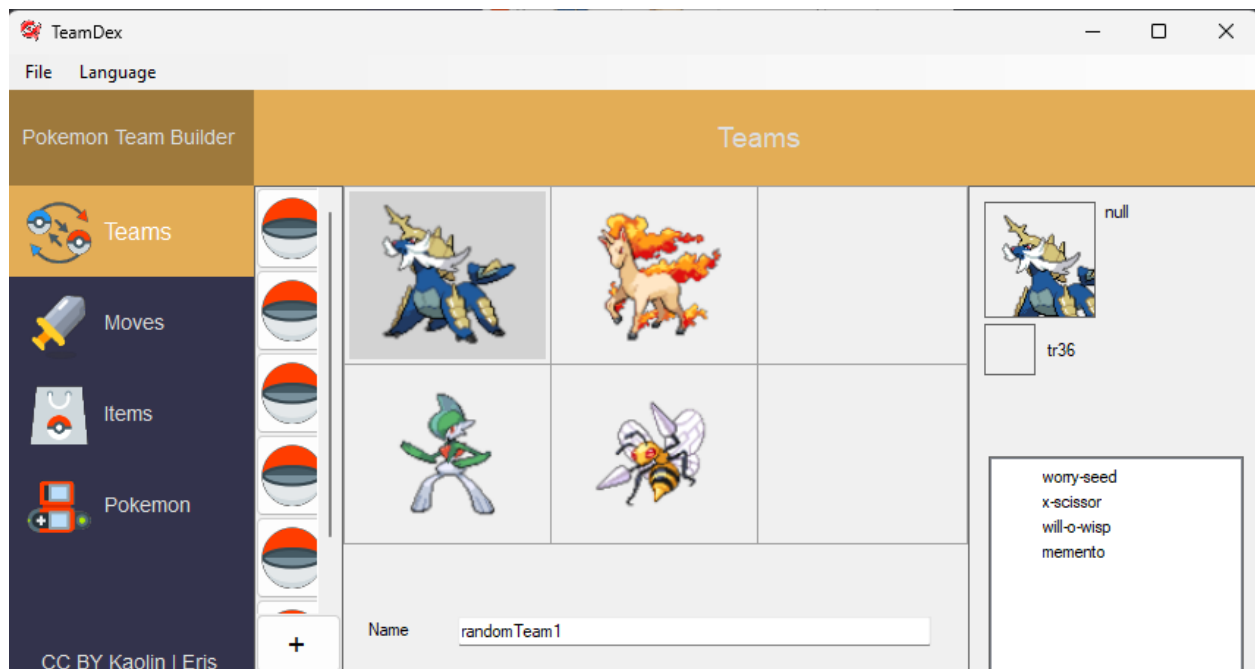

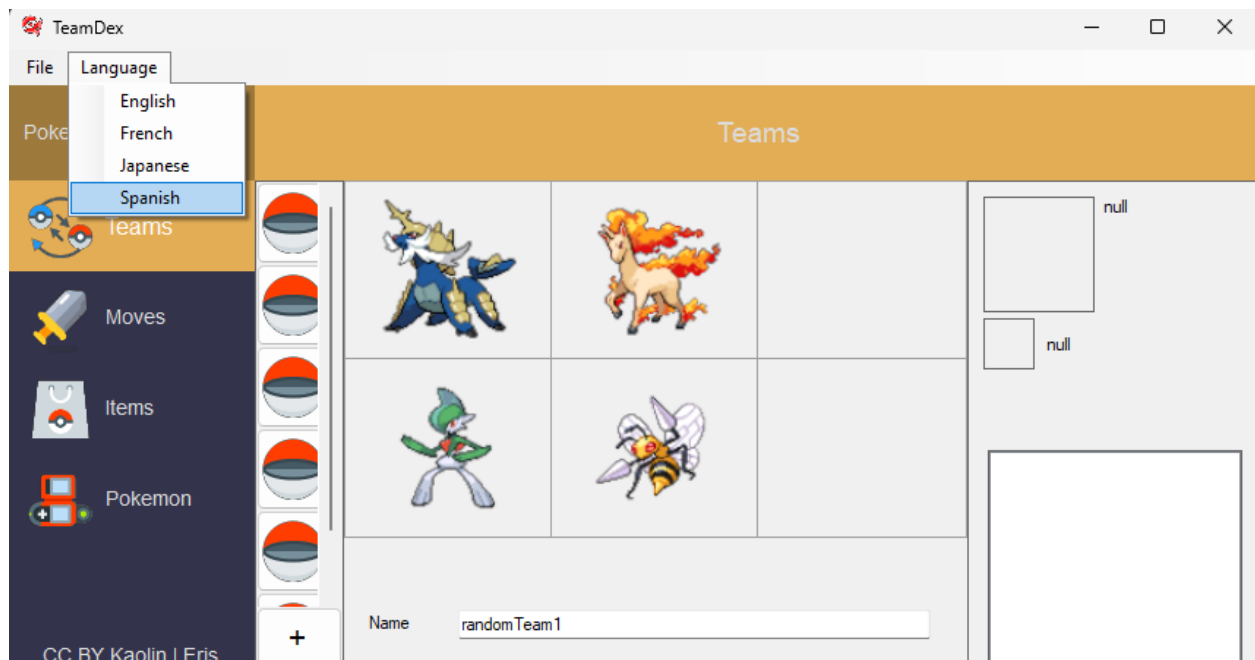

This is the main page and feature set of our Pokemon Team Builder, the ability to create and manage teams that you create. These teams are generated based on the THOUSANDS of resources collected from the PokeNet.Api database. As you can see from the picture below, we have it in one of the 3 languages we have set, Japanese, which was the country of origins language for Pokemon.

We have a language combobox you can select from in the top left-hand corner to translate the application from either English, French, Japanese, and Spanish(work in progress).
